Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	http://localhost:8501 / http://192.168.0.15:8501
Login Credentials	Not Necessary
Hosting Platform Provider	Render / Streamlit Community Cloud
Repository Link	https://github.com/MANASA-0713/SMART-BRIDGE-PROJECT
Demo Video Link	https://drive.google.com/file/d/1J9udZqJXq6tT87byewiUv60GaM886xkB/view?usp=drive_link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.10+ installed globally.
- At least 8GB of system RAM (required to load the local transformer pipeline model into memory).

Step 1: Clone the repository: git clone < <https://github.com/MANASA-0713/SMART-BRIDGE-PROJECT> >

Step 2: Install dependencies: pip install -r requirements.txt

Step 3: Start the FastAPI backend server: uvicorn main:app --reload

Step 4: Start the Streamlit frontend client: streamlit run app.py

Step 5: Access the application: Open your web browser and navigate to <http://localhost:8501>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	First-load delay for local model: Opening the Concept Explainer the very first time causes a 2-3 minute pause.	Status: Normal. The system is downloading the MBZUAI/LaMini-Flan-T5-783M weights locally. Subsequent calls run fast.
2	Gemini API Rate Limits: Free-tier keys might hit temporary rate limits during heavy Q&A usage.	Workaround: Implemented clean, user-friendly exception warning cards. Simply retry the prompt after a brief pause.
