| <b>Date</b>          | 10 July 2026                                      |
| <b>Team ID</b>       | XXXXXX                                            |
| <b>Project Name</b>  | EduGenie Google Gemini Powered Learning Assistant |
| <b>Maximum Marks</b> | 1 Mark                                            |

### Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.

| S.No | Communication Type      | Frequency | Channel / Tool                           | Participants  | Purpose                                                                                              |
|------|-------------------------|-----------|------------------------------------------|---------------|------------------------------------------------------------------------------------------------------|
| 1    | Task Planning           | Daily     | Notion / VS Code                         | Manasa Rayala | Set daily goals, track active coding tasks, and log immediate development blockers.                  |
| 2    | Progress Update         | Weekly    | Github                                   | Manasa Rayala | Review weekly commits, merge feature branches, and track overall sprint progress.                    |
| 3    | Issue / Bug Discussion  | As Needed | Google / Stack Overflow                  | Manasa Rayala | Research and debug critical API integration errors and system package conflicts.                     |
| 4    | Mentor / Faculty Review | Bi-Weekly | Smart Bridge Mentor / University Faculty | Manasa Rayala | Present bi-weekly incremental builds to project mentors to gather structured feedback.               |
| 5    | Final Demo Rehearsal    | Once      | Local Environment                        | Manasa Rayala | Conduct a comprehensive dry run of the live application to catch edge-case bugs before presentation. |

### Communication Challenges & Resolutions:

| S.No | Challenge Faced                                                                                                                                                                                    | Resolution / Action Taken                                                                                                                                                                                                              |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | Isolation in Problem-Solving:<br>Getting stuck on complex technical bugs without a team member to bounce ideas off.                                                                                | Utilized structured rubber duck debugging techniques and engaged with online developer communities to work through technical roadblocks.                                                                                               |
| 2    | Standardizing Diverse Documentation Formats:<br>As a solo developer, converting technical code files and markdown files into a unified, formatted academic PDF template was highly time-consuming. | Adopted a "Documentation-as-Code" workflow. Used markdown engines and pre-structured templates to auto-compile technical notes, code blocks, and flowcharts directly into standard PDF formats without disrupting the coding schedule. |
